

# OXO-B ECO BUBBLE

## POLYCELL OXO-BIODEGRADABLE ECO BUBBLE Incorporating 'REVERTE' Oxo-biodegradable Additives

**REVERTE added at manufacturing**

Polycell's Oxo-B Eco Bubble incorporating 'Reverte' Oxo-biodegradable masterbatch is the result of running numerous trials using a wide range of additives over a long period of time.

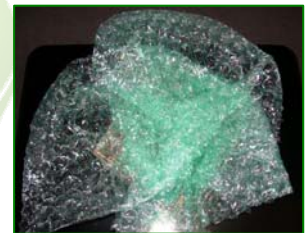

**FINISHED PRODUCT  
Ready for application  
(shelf life approx 18 months)**

We settled on the use of Reverte as the end result in the degradation process of our products far outweighs that of some like products that currently exist in the market place.

Incorporating 'Reverte' Oxo-biodegradable additives into our polyethylene resins will ensure that once Eco Bubble's useful life is over and it has been discarded into a rubbish tip or landfill it will degrade (crack) and finally breakdown into smaller pieces with the aid of UV light & or heat.

**END OF USE – Recycle?  
(minimal environmental  
Impact) OR....**

**COMPLETION OF  
DEGRADATION  
(only Biomass,  
CO<sup>2</sup> & H<sup>2</sup>O remain)**

Then with the help of the unique additives, degradation is complete leaving only Biomass, CO<sup>2</sup> and H<sup>2</sup>O

**INPUT INTO LANDFILL SYSTEM  
(start of degradation)**

- ✓ Enhancing the Future
- ✓ Minimal Environmental Impact

- ✓ Fully Recyclable
- ✓ Fully Biodegradable
